

AgriGravity Technologies Pvt Ltd

Role: Backend Development

Our vision

We are an innovative fintech startup working in food supply chains. We help farmers and agricultural SMEs sell anytime, anywhere. Currently, our customers are spread across 10+ Indian states. We are a team of fully committed and hard-working people. We are creating a supportive and positive environment of corporate work based out of Jaipur. We love team members who do smart work, do right for the company and take full ownership of work.

Key role

We are looking for a Backend Software engineer to write software code and help our business operations.

Tech You'll Work With:

- Node.js + TypeScript for backend services
- PostgreSQL for database management
- AWS for cloud infrastructure (Lambda, API Gateway, ECS, RDS & more)
- React + Next.js for collaboration with frontend and full-stack features

What You'll Do:

- Build robust APIs and backend services on AWS
- Collaborate with frontend engineers on full-stack features
- Optimize and manage PostgreSQL databases
- Contribute to architecture decisions, CI/CD, and production readiness

What We're Looking For:

- Fresher and 1+ years experience building modern backend systems
- Strong coding skills in TypeScript and Node.js
- Experience working with AWS cloud services
- Familiarity with React, Next.js, and full-stack collaboration

- Proficiency in PostgreSQL and writing efficient queries

Why You'll Love It Here:

- Work with modern tools on a meaningful product
- Remote-friendly & flexible hours
- A team that values clean code, autonomy, and innovation

Benefits

- ✓ WiFi access
- ✓ Office parties
